

Property card

SWG Waldenburg

Category: Office / Administration

Year: 2021

Type: New building

Architect: HK Architekten

SWG's new administration building in Waldenburg is an architectural statement of modern timber construction and sustainable design: transparent room structures, natural materials and a light-flooded working environment characterise a building that harmoniously combines functionality, aesthetics and ecological responsibility.

Wooden architecture creates elegant simplicity.

The modern timber architecture combines functionality with timeless aesthetics. The timber supporting structure symbolises the connection to nature and underlines the company's sustainable orientation. The combination of wood for the load-bearing elements and metal for the façades reflects SWG's product range, which is active in both the wood and metal sectors. This harmonious combination of materiality and design creates an elegant simplicity that is both functional and aesthetically pleasing.
